

Rapid Inventory Assessment

Our Inventory Optimization Service provides a point-in-time assessment of your current inventory performance while forecasting future demand for all SKU's in all inventory locations.

- Data files are created by client and uploaded into our custom-built REACS inventory optimization tool
- Dead stock and poorly performing items are identified
- Understocked high performing items are assessed
- A roadmap for reducing inventory to unlock over-investment of cash is provided
- Opportunity is realized for immediate inventory cleanup and on-demand reassessments in the future can be performed

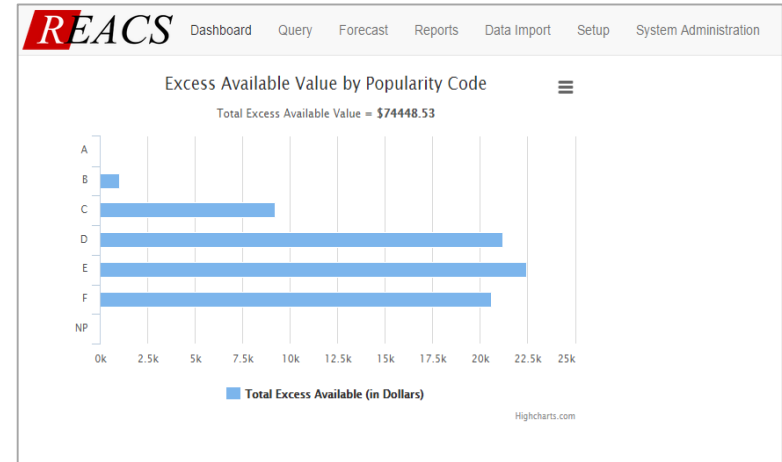

Order Point Forecasting

- Order point optimization for all SKU's and locations (min & max) is performed
- Inventory winners and losers are easily identified by vendor in addition to SKU or location
- Location by location customized outcomes including Truck/Van/Rolling stock locations are provided

Outcomes

- Our experience shows between 25% and 60% typical net over-investment in inventory
- Our experience shows up to 20% under-investment in high performing or high usage items
- Detailed insight into value creation opportunities via inventory optimization is generated
- On-demand inventory analysis at a low price without the need to invest in or implement software
- Inventory Demand Forecasting Service from experts in Inventory Management
